OR

Alamance Regional Medical Center
1240 Huffman Mill Road
Burlington, NC 27215
(336) 538-7575

Please take advantage of the free valet parking available at the MAIN entrance. Proceed to ARMC registration for check-in (first floor).

Magnetic resonance imaging (MRI) is a painless test that produces images of the inside of the body without using Xrays.

During an MRI, strong magnets and radio waves work together in a magnetic field to form detailed images.

MRI images may provide more details about a medical condition than X-rays, CT scans, and ultrasounds can provide.

You may be given earphones to listen for instructions.

You may eat a light breakfast and take medications as ordered with the exception of furosemide, hydrochlorothiazide, or spironolactone(fluid pill, other). Please avoid stimulants for 12 hr prior to test. (ie. Caffeine, nicotine, chocolate, or antihistamine medications)

If a contrast material will be used, an IV will be inserted into one of your veins. Contrast material will be injected into your IV. It will leave your body through your urine within a day. You may be told to drink plenty of fluids to help flush the contrast material out of your system.

You will be asked to remove all metal, including: Watch, jewelry, and other metal objects including hearing aids, hair pieces and dentures. Also wearable glucose monitoring systems (ie. Freestyle Libre and Omnipods) (Braces and fillings normally are not a problem.)

TEST WILL TAKE APPROXIMATELY 1 HOUR

PLEASE NOTIFY SCHEDULING AT LEAST 24 HOURS IN ADVANCE IF YOU ARE UNABLE TO KEEP YOUR APPOINTMENT.
